THERMAL TREATMENT:

Hardening

In case of low carbon level, heat slowly up to 760-800 °C.

In case of high carbon level, maintain on minimum temperature. Leave the temperature uniforms. Then harden in well stirred (agited) water. Hardness reached after hardening: about 65-68 Hrc. The approximate quench hardness is 65 to 68 Rc.

TEMPERING

Proceed with temperatures between 180 °C and 350 °C according to the usage needs and referring to the tempering curve (see below).
